Tutoriel : BBK Solo et Duo / Brown marks or spots inside the boiling tank

1. Problem description:

- See picture
- appearance problems
- not hazardous to health
- not dangerous for the operation of the device

SOLUTION :
Clean the tank with
lemon juice

2. Information :

- Such traces are residues of organic material contained in the water. This organic material had been burned during the heating cycle (hence the brownish color). This is not a carbonization.
- One can find these marks on a new unit for each product as factory testing to verify operation of the device: a complete heating cycle is performed with water. The tanks are emptied, dried, but it is possible that traces beyond the control.
- Depending on the quality of the water used (tap water), these traces may also appear after several uses.

3. Solution : Clean the tank with lemon juice

1. Pour into the tank 50 ml of pure lemon juice * + 100 ml clean water
2. Close the lid and initiate a heating cycle
3. When steam begins to move in the bowl STOP the cycle
4. Unplug the appliance
5. Let cool for 30 minutes
6. Empty the tank and rinse 3 times the tank with clean water
7. Dry the tank

* You can use the juice of 2 fresh lemons as well as concentrates
