## Getting Started

---

The first step in using your device is to charge it. To charge the device, connect it via the included USB cable to either a computer or an AC outlet. While charging, the two indicator lights will illuminate: the RED light will flash and the BLUE light will remain solid. When charging is complete, the blue Indicator light will remain solid and the red light will power off. Before first use, be sure to charge the device for at least 4 hours.

This device does not have internal memory and relies on a micro SD card for recording. The micro SD card should be inserted with the gold contacts facing up in the direction of the control keys.

Before inserting a micro SD card, make sure the card is formatted correctly. The device can record in the FAT32 format. If you aren't sure how to format an SD card, you can find instructions at [help.brickhousesecurity.com](http://help.brickhousesecurity.com).

If you plan on viewing your files on your computer, we suggest using VLC Player. The most recent version can be downloaded at no cost from <http://www.videolan.org>.

To power the device on, hold down the power button/video recording key for about 3 seconds. The LED indicator will light up solid blue to indicate it is on, in standby mode, and ready to record. Long press the power button/video recording key to power down.

## Time and Date Stamp

Connect the device to a USB port on a PC or Mac with the SD card already inserted and access the removable drive. Open the time text file. Here you will edit the time and date. (Format: year-month-day hour-minutes-seconds 2018-11-11 23:00:00. Y is for time stamp enabled, N is for time stamp disabled . After entering the information, select file and click save. Safely eject the drive from your computer.

## **Recording Video**

---

From the standby mode, hold down the power button/video recording key for 3 seconds. The indicator light will blink blue 3 times and then go out to indicate it is recording video. To stop and save recording, press the power button/video recording key again and the device will return to standby mode. Press the power button/video recording key to begin taking a video again from standby mode.

## **Taking a Photo**

---

From standby mode, press the photo key. The LED will blink red 3x to confirm the photo is taken. Press the photo key again to save photo to SD card. Indicator light will briefly turn solid red and go back into standby mode. To take another photo, repeat the steps.

## **Recording Audio**

---

To record audio from the standby mode, press the audio recording key. Both indicator lights will blink red and blue 3x each to indicate that the audio file is being recorded. To stop and save recording, press the audio recording key again and both indicator lights will turn solid and then return to standby mode.
