

# ***How to Reconnect a Dymo Printer***

---

## **Issue:**

Dymo printer lost connection to the computer.

## **Resolution Steps:**

### **1. Unplug the Printer:**

- Disconnect both the **power cable** and the **USB cable** from the printer.

### **2. Discharge Remaining Power:**

- Wait about 10–15 seconds to allow any residual power to discharge completely.
- Or press the power button till the light turns off.

### **3. Reconnect the Printer:**

- Plug the **power cable** and **USB cable** back into the printer and the computer.

### **4. Verify Connection:**

- Confirm that the printer is recognized by the computer and is ready to print.

## **Result:**

The printer successfully reconnected and was operational.
