We can see which services have this issue by running the following query:

```
Use cw_data
select srv_pk, srv_total, srv_price, srv_quantity
From cw_service
Where srv_total <> srv_price*srv_quantity
```

The service totals can be re-calculated by setting them to the cost times the units value by running this update query:

```
Use cw_data
Update cw_service
Set srv_total = srv_price*srv_quantity
Where srv_total <> srv_price*srv_quantity
```
