

# Enable integration with Zoho CRM

HappyFox integration with Zoho CRM lets you access your customer information from your HappyFox interface and also allows you to view tickets associated with Zoho CRM customers in the Zoho CRM interface itself. You would, however, need an active Zoho CRM subscription to enable this integration.

Who can enable this integration?

"Admin" of your HappyFox account can enable the integration with "Zoho CRM" by visiting Manage --> Integrations page.

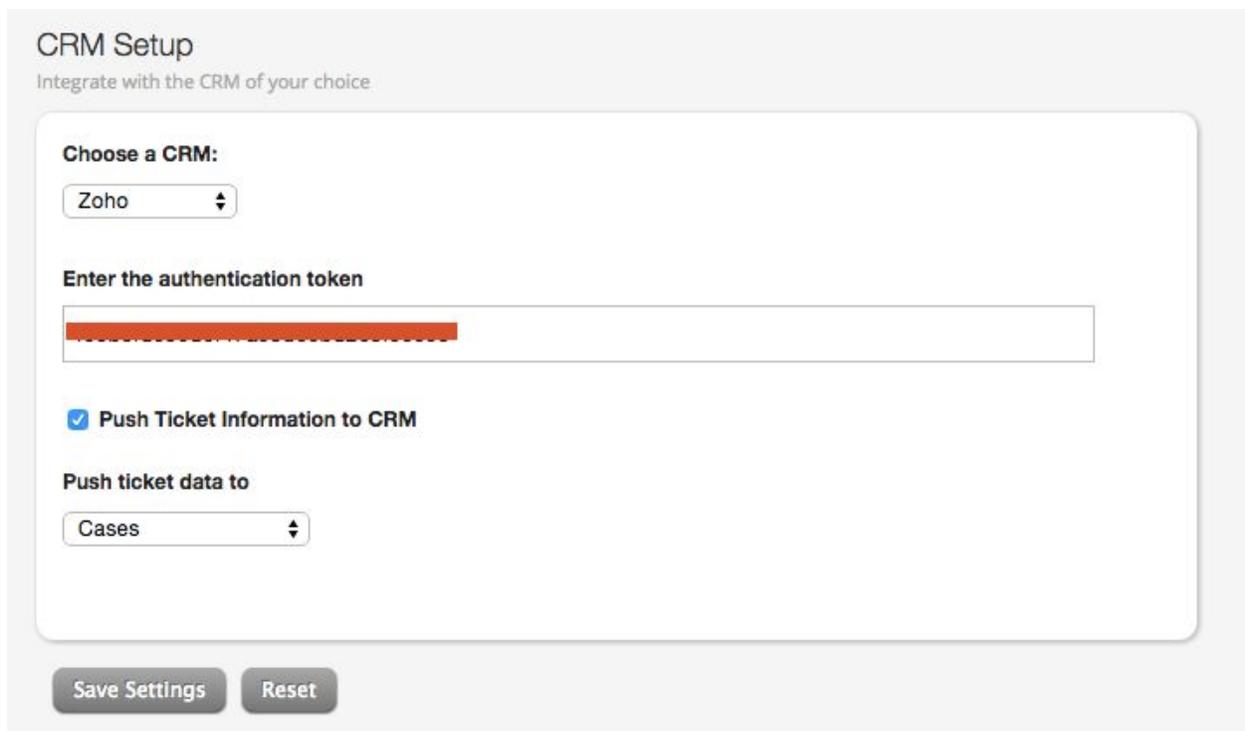

How to set up the integration?

To enable Zoho CRM integration with your HappyFox account, you can follow the steps below:

1. Get the API key from Integrations section in Zoho CRM
2. Go to Manage --> Integrations in HappyFox
3. Below the External section, click the Configure button near CRM Integration
4. Change CRM Integration Active option to "Yes"
5. Choose "Zoho" under Choose a CRM drop down
6. Enter the Authentication token provided by Zoho CRM

7. To push new tickets and updates to Zoho CRM, select the checkbox Push Ticket Information to CRM

8. Click "Save Settings"

The image shows a 'CRM Setup' configuration page. At the top, it says 'CRM Setup' and 'Integrate with the CRM of your choice'. Below this is a section titled 'Choose a CRM:' with a dropdown menu set to 'Zoho'. Underneath is a section 'Enter the authentication token' with a text input field containing a redacted token. A checkbox labeled 'Push Ticket Information to CRM' is checked. Below that is a section 'Push ticket data to' with a dropdown menu set to 'Cases'. At the bottom of the form are two buttons: 'Save Settings' and 'Reset'.

Once this is done, a section "*Customer info from Zoho CRM*" appears in your ticket details page with your customer information from Zoho CRM displayed. You can also go to contact edit page of Zoho CRM by clicking the *Edit* link here.
