

Disabling Private Address – Apple products

Starting with Apple IOS 14 and iPadOS 14, there is an additional feature called *Private Address*. This feature is not compatible with uninterrupted on-campus wireless services. Washington & Jefferson College highly recommends turning off the Private Addressing for on-campus continuous wireless services. Follow the below link for Apple instructions:

<https://support.apple.com/en-us/HT211227>

Information

The *Private Address* feature will need to be disabled for each connected wireless network. For example, if a device is connected to *WashJeff*, the *Private Address* feature will need to be disabled in the *WashJeff* Wi-Fi settings on the Apple device.

The maximum total number of networking devices per username is seven.
